To investigate the relation of body mass index (BMI) to microalbuminuria in an adolescent population with type 2 diabetes. A retrospective cross-sectional study of 130 type 2 diabetic adolescents (mean age 13.8 +/- 2.8 years, mean duration 8.2 +/- 4.0 years, mean weight at the last clinic visit 70.0 +/- 18.7 kg, mean BMI 19.7 +/- 4.6) and 90 (70%) of their parents were reviewed. The influence of BMI on microalbuminuria (measured as the urinary albumin/creatinine ratio [UACR]), microalbuminuria for the group as a whole, and for the population with a normal UACR was determined. The duration of diabetes, metabolic control, and HbA1C levels were assessed for their possible influence on the UACR. A significantly higher UACR (P =.005) was found in the group with a higher BMI. The UACR was higher in more obese patients (P =.04), with a significant negative correlation between the two (r = -.37, P =.002). A higher UACR was found in those with a longer duration of disease. No significant difference in HbA1C levels was found between the groups with or without microalbuminuria. The same trend was found for the population with a normal UACR, but the difference was not significant. This study suggests a relation between obesity and microalbuminuria in adolescents with type 2 diabetes./** * * WARNING! This file was autogenerated 648931e174

Although its wide-open aperture of f/4-5.6 is the same as that of the Sigma 70-300mm f/4-5.6 DG OS HSM, the Tamron is just as comfortable in low-light situations. A large minimum focusing distance of 0.8m and autofocus are the reasons why the Tamron is a lot more comfortable to use than the Sigma. And since it is quite lightweight, it is a lot less difficult to manipulate than the Sigma. Image Stabilization System While the other lenses in this lineup do not feature the stabilization system, Tamron is the only company with a lens that does. Although the stabilization system itself is not very durable, it is great for users who do not want to carry a small stabilization rig or stabilize their camera for sports and dance photography. The stabilization system is attached to the focus ring of the lens and allows users to prevent the blurring of images that occurs with

unstabilized camera movements. Although we are yet to see if the stabilization system would be as effective as on the Sigma, the Tamron has a good chance to be a competitor for Sony's own stabilization system on the 85mm. Although the stabilization system itself is not very durable, it is great for users who do not want to carry a small stabilization rig or stabilize their camera for sports and dance photography. The stabilization system is attached to the focus ring of the lens and allows users to prevent the blurring of images that occurs with unstabilized camera movements. The Tamron's Image Stabilization works to stabilize video footage and is great for stationary shots. The stabilization feature is so subtle that there is no visible difference when it is off or on, but when the stabilization system is on, the amount of blurring that occurred can be noticed. Since this is an internal stabilization system, the speed at which it performs will depend on the camera's ability to
